

Thompson Mine Expansion

Thompson Mine is a nickel mine owned by Vale in Northern Manitoba. It is presently in the execution phase of its Phase 1 Mine Expansion Project.

This project aims to extend the mine life by 10 years and involves the development of critical infrastructure, including:

- new ventilation raises,
- booster fans,
- backfill plant,
- increased power distribution; and
- underground garage expansion.

These initiatives enable Vale to mine at greater depths and pursue further exploration.¹

Peter Lucas takes pride in supporting the Thompson Mine Expansion project team by providing seconded resources to assist in:

- construction planning,
- construction management,
- construction coordination; and
- project coordination.

At Peter Lucas, we consider ourselves as Owner's Representatives, always prioritizing the best interests of our clients.

Our project professionals work closely with Vale's Thompson Mine Expansion project team to develop work packages, schedules, manage and coordinate construction activities, oversee contractors, and offer valuable input through project reporting. This ensures the seamless execution of Phase 1 construction.
